Structure of Carrier Package Unit Model Numbers

Carrier's model numbers follow a standardized format, which includes a combination of letters and numbers. While variations may exist across different series or product lines, most Carrier model numbers generally adhere to a pattern that encodes the following:

Common Components of a Carrier Model Number

- **Series Indicator:** Denotes the product line or series, such as Performance, Comfort, or Infinity.
- **Size/Capacity Code:** Indicates the unit's cooling/heating capacity, usually in tons or BTUs.
- **Efficiency Rating:** Encoded with a letter or number representing the SEER or HSPF efficiency rating.
- **Configuration and Features:** Details such as single or multi-stage operation, special features,

or specific configurations.

- **Optional Custom Codes:** Additional identifiers for special features, regional adaptations, or custom installations.

For example, a typical Carrier model number might look like: 24ABB036.

Breaking it down:

- 24A: Series indicator
- B: Configuration or feature code
- B: Additional feature code
- 036: Capacity in thousands of BTUs (e.g., 36,000 BTU, or 3-ton capacity)

Understanding each segment helps identify the unit's exact specifications.

Decoding Carrier Package Unit Model Numbers

To interpret Carrier model numbers accurately, it's important to understand what each segment signifies and how to relate it to the unit's performance and features.

Series and Line Indicators
