Entropy and Its Significance

Entropy, denoted by $H(X)$, measures the average amount of information produced by a stochastic source. The manual explains the calculation of entropy for discrete random variables:

$$H(X) = -\sum p(x) \log_2 p(x)$$

where $p(x)$ is the probability of each symbol x . The manual provides step-by-step solutions to problems involving entropy calculations, illustrating how to interpret the results in terms of information content and source efficiency.

Core Elements Covered in the 2nd Solution Manual
